

IRIS.AI

Smart tools for Chemical R&D

Effortless leveraging of information from millions of documents

Discover

Map out all papers, patents and other documents related to your research question.

Proven increase in spot on findings, superior overview and increased interdisciplinarity compared to existing search tools.

Identify

Find new applications for your compounds, from any scientific literature.

Systematize serendipity - find new revenue streams for your chemicals through machine review of interdisciplinary sources.

Extract

Extract key data from patents, papers and other scientific literature.

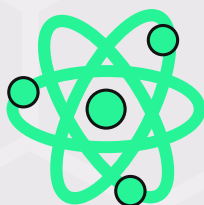

Two months of manual data extraction from patents done in a few hours, so your researchers can focus on more value bringing work.

Your problem?

We can also co-develop custom solutions to automate the navigation, understanding, usage or leverage of scientific documents. Tell us what you are working on!

The AI engine

The machine deals with similarity, compositionality, causality and corresponding ranking metrics of scientific text in research papers, patents, internal documentation ++

AI-enable your R&D without the need for in-house AI expertise!
